Developing module on “Health Education and Promotion” and piloting and implementing it	October 2018 – present time	The module was developed, and the content was successfully piloted as a part of the five-days SciCamp Summer School "Healthy Future" with 12 participants in July 2019. The goal of this school was to present an evidence-based scientific approach to the prevention of cardiovascular, oncological, respiratory diseases and diabetes mellitus. The program included lectures by leading specialists, practical training of acquired skills, and the final project. The participants learned what noncommunicable diseases and their risk factors are, what methods for effective prevention of cancer, obesity, myocardial infarction, etc. exist, what are the most effective prevention strategies, and why health promotion is needed. In addition, the School's curriculum also included final group projects - the	75

		<p>development of prevention programs, that helped participants to apply the acquired knowledge about healthy lifestyles and healthcare organization in practice. The feedback was collected.</p> <p>The content also was piloted during the lectures for the international students of the 5th year of education.</p> <p>The module is planned to be implemented as a continuing medical education course in spring 2021. The module to be included to the Management Master's programme for 2021-2022 agenda.</p>	
Developing module on "Patient-Centered Care" and piloting and implementing it	October 2018 – present time	<p>The module was developed, and the content was successfully piloted as a part of the five-days SciCamp Summer School "Healthy Future" with 12 participants in July 2019. The content also was piloted during the lectures for the international students of the 5th year of education.</p> <p>The module is currently under the review.
